

SS 2015

Social Robotics Seminar

Welcome!

Prof. Kai Arras

Timm Linder, Billy Okal, Luigi Palmieri

SS 2015

Social Robotics Seminar

Contents

- Brief presentation of the Social Robotics Lab
- Introduction
- How to conduct a literature review
- How to read a paper
- Presentations of the papers

Social Robotics Lab

- **Social robotics and human-robot interaction** are growing research fields concerned with the questions how humans and robots can better **live, work, and interact** together
- Research areas
 - Perception of humans
 - Human behavior modeling and learning
 - Task and motion planning among humans
 - Design of human-robot-interfaces
 - Understanding human-robot interaction
- In other words: „**the human is in the loop**“
- Methods from robotics are combined with models, methodologies and insights from **social psychology, cognitive science** and HCI

People Detection and Tracking

People Detection and Tracking

Emotional Body Language for HRI

emotion start

Socially-Aware Coverage Planning

Learn how to cover an inhabited environment with minimal interference

- Spatio-temporal Poisson process model for human activities
- Approach: **asymmetric TSP with time-dependent costs**
- Applications: noisy vacuum robot, all coverage applications in human environments

Robot is in kids bedroom since at this time and place, encountering a human is improbable

It's around 8 pm, human agents are engaged into a dinner activity

Introduction

Overview

- In this seminar, you will learn to **search for, read, present** and **summarize** scientific papers
- In this way, students
 - learn to conduct a literature survey
 - learn to **understand** and **critically read** a paper
 - learn about **state-of-the-art methods** in the field
 - learn to **present** and **summarize a paper**
 - improve their presentation and scientific writing skills
- Language: English
- The seminar is restricted to **10 students**. First come, first serve.
- There are more students on the **waiting list**. Make up your mind.

Introduction

Requirements

- In the area of your paper, conduct a small **literature review**
- **Present** your paper and the results of the literature review in a 30 min. talk
- **Blockseminar**
 - Attend the Blockseminar and **actively** participate in the discussions
 - Read all presented papers (also those of the **other** students!) in a quick "first-pass" fashion (see below).
- Write a summary about your **assigned** paper (≤ 7 pages). The report should contain a section with the results of the literature review. This section should contain answers to the questions on slide nr. 17
- The **final grade** is a combination of four factors:
 - literature review (20%), presentation (30%), summary report (30%), active participation during the Blockseminar (20%)
- Talk and summary can either be in **German** or **English**

Introduction

Hints for a good grade

- Some papers are **easier**, some are **more difficult**. For the sake of fairness, **additional work** and a particular deep understanding is expected for easy papers
- Additional work may include:
 - **Implementing** a method
 - Submitting **additional material** such as self-made animations
 - Explain a theory or method very well, as a **mini-tutorial**
 - Reading **more related papers** (e.g. earlier work from the same authors, more related papers, etc.) and show that you
- Make your presentation **exciting**, try to convince the audience of the quality and contribution of your paper
 - Use the videos and other material from the authors
 - Add your own material (graphs, animations, etc.)

Hints for a good grade

- Unethical behavior will result in a grade of 5.0
 - Examples include copying text, slides, material for your summary report or presentation from sources without proper citation
 - Wikipedia is **not** a serious scientific reference. Rare exceptions may apply
 - It has never been easier to detect plagiarism
- Plan accordingly! Avoid last-minute stress
 - Understanding a short 6-page paper will very probably require you to **study** (or even **implement**) several other papers (of the same authors, papers about the underlying theories)
 - This will easily take you **several weeks of work**

Introduction

Organization

- **Today:** Introduction, short presentation of the papers
- **Friday, 8 May 2015:** Assignment of the papers to the students
- **Monday, 13 July 2015:** First version of the slides and the report must be sent to the supervisor
- **Monday, 27 July 2015:** Blockseminar in which all papers are presented and discussed
- **Friday, 31 July 2013:** Final version of the report has to be submitted to the supervisor.
